1,200 LBS

If you determine that less than 12" of surfacing is required, make sure the top of the concrete is 12" below the top of the protective surfacing.

NOTE: Read installation instructions thoroughly before starting installation process.

Step 1: Lay out the area and prepare the site for install. Concrete must be installed over a solid, level base. Check local soil condition and codes. See product installation instructions for minimum use zone requirements to ensure proper spacing and adequate surfacing area.

Step 2: Refer to the typical in-ground footing detail on excavating a hole for the Component.

Step 3: Attach the in-ground legs to the Cannon Climber using hardware kit# 8-01. Slide the rebar into the holes in the in-ground legs.

Step 3: Place the component into the excavated footing, temporarily bracing when level and plumb. Pour a concrete footing. The concrete should be flush with the ground level, as shown in the typical in-ground footing detail. Allow time for the concrete to cure completely before continuing.

Step 4: Remove temporary bracing. Attach the wheels to the frame using Hardware Kit #8-02
