## Assembly Instructions

**Step 1:** Lay out the area and prepare the site for install. Concrete must be installed over a solid, level base. Check local soil condition and codes. See product specification sheet for minimum use zone requirements to ensure proper spacing and adequate surfacing area.

**Step 2:** Pour concrete slab for the Giant Baseball Bat. Refer to the typical slab section in these installation instructions. The concrete should be flush with the sub-grade surface. Allow time for the concrete to completely cure before continuing.

**Step 3:** Using an appropriate lull-type forklift or boom, place play equipment into final installation location. See the hardware recommendation page for information on anchoring equipment down to your slab. Position the bat halves so the seam is tight. Shim as needed. Using hardware kit HK-128, anchor the bat halves to the concrete. Using hardware kit HK-150, caulk the seam between the bat halves. Refer to the surfacing manufacturer for installation of an approved impact attenuating play surface around the Giant Baseball Bat with a minimum of 6 feet in every direction.
